# HEBEI XINYU- Supply of a Complete Range of Nuts, Stamped Parts and Washers

With a factory area of over 50 acres and around 40 employees, Hebei Xinyu Metal Products Co., Ltd. specializes in producing and exporting various specifications of furniture T-nuts, wing nuts, T-nuts with prongs, welded nuts, etc. The main materials used are carbon steel (08AL, 195L), stainless steel 304 (A2), and stainless steel 316 (A4). The innovative stamping technology, excellent quality and service have earned Xinyu Metal a wide reputation in the highly competitive global market over the years, making it one of the most recognized and innovative manufacturing companies in the industry.

## Diverse Product Applications

## Bestselling in Europe, USA, and Southeast Asia

Xinyu Metal's product manufacturing process strictly follows international quality control systems and has obtained the ISO9001 certification. **Its factory is equipped with more than 180 sets of stamping machines and tapping machines, with an average monthly capacity of 100,000,000 pieces.** With the hard work of its team over the years, its products have been successfully sold to dozens of mainstream markets in Europe, the U.S., and Southeast Asia, and are widely used in furniture manufacturing, automotive assembly, rock climbing projects, decoration engineering, and other fields.

"We have a team of product development and mold design, and the forming of main products is automated. Our advanced production process guarantees excellent product quality and competitive prices. More importantly, our consistent product quality and on-time delivery have earned us a good reputation and enabled us to continue to lead in a competitive market," said General Manager Yan.

## Multiple Patents and Certificates

## Stainless Steel 4-Prong T Nuts and Weld Nuts Sell Well on the Market

In addition to the **ISO9001 and CE certification**, Xinyu has a variety of invention patents. **The recently developed stainless steel 4-prong T nut and stainless steel weld nut feature super corrosion resistance and can function safely under -270°C~400°C for a long time. With good environmental performance and toughness, it can help users deal with wet, acid, alkaline and other indoor and outdoor extreme environments and maintenance**, which has been favored by many customers in pursuit of top quality.

"In response to the new trend of shorter development time and higher material and mechanical performance, we have not only increased our efforts to introduce optical sorting machines to strictly inspect our products, but also expanded our mold development team to continuously explore and improve existing designs and introduce new ones in order to shorten the time required for mold development to production and to satisfy our customers' shorter time requirements," said Yan.

## Building a Topnotch Workshop & Reinforcing Sales to America

Although the risk of material cost changes is still high and soaring shipping costs are eating into profits, Mr. Yan believes that the product market and customer demand are slowly returning to normal. Next, Xinyu will focus on the American market such as the U.S., Brazil and Mexico, providing customers with the most complete product range and specifications to help them save purchasing and transportation costs.

Yan also noted, "We are currently expanding and renovating our factory, hoping to build a first-class workshop with the best technology to support the quality and timely delivery of products." ■
