

Proton Fasteners- The Rock- solid Support for Renewable Energy Applications

Contact: CEO Javi Folgoso
Email: comercial@protonsl.com

Barcelona-headquartered Proton Fasteners S.L. founded in 2016 is an industry-leading supplier specifically dedicated to the supply of high resistance bolts, with its customers distributed around the world, mostly from metal construction, petrochemistry, and the rising renewable energy industry sectors.

With a vision of being a market benchmark and main supplier for customers' process improvement, the ISO 9001:2015 certified Proton collaborates with many international standards approved factories in Turkey, China, Poland, etc. that can guarantee its customers quick access to quality products at all times. Currently, Proton has a warehouse in Barcelona with a capacity for 300 pallets and also has representatives in Europe, Asia, and N. America to ensure seamless service offered to customers wherever they are. "Our customers are mostly in Europe, but we also have customers in USA, Mexico, Vietnam, Turkey, and Morocco," said Javi Folgoso, CEO of Proton.

With experienced service and premium quality as its middle name, Proton does whatever it takes to fulfil them into its quality control procedure. For instance, it visits collaborating factories to ensure good quality control and manufacturing process, thus allowing each piece of product delivered from its warehouse to be always in compliance with relevant standards requirements. On the other hand, Proton's "Online Shop" is also a worth-noting resource enabling customers to view quotations and the availability of certain products in stock immediately.

In order to provide customers worldwide with real-time service, "This year we've planned to establish two new operations overseas, including one office in Mexico and an extra new warehouse in Asia," said Javi. "With our capabilities, we can provide all the solutions to our customers with big projects around the world. Our knowledge in structural bolts (EN 14399-4 and SB EN 15048) make us a reference as well."

Despite more unique customers' requirements in 2024, Proton continues to demonstrate its leadership and impeccable adaptability in offering the best ever products and service to its customers, which consolidates its firm presence and sustainability in the era with more new challenges (especially the rising demand from renewable energies). ■
