

UAF-certified, Eco-friendly, Non-metallic Washers Yi Hung Washer

Established in Shulin District in New Taipei City (Taiwan) for nearly 30 years, Yi Hung produces precision plastic washers, as well as plastic screws, nuts, electronic stamped parts, terminals. Their greatest strengths are on-time delivery, excellent quality, friendly service, competitive pricing, and the ability to manufacture regardless of the number of orders. Flexible production and customized design, supplemented by UAF (United Accreditation Foundation) and ISO 9001 certificates, ensure that their quality control is improved and that customers can get top quality products.

Specializing in Non-metallic Flat Washers in Diverse Materials

Yi Hung's precision washers are mainly in small sizes with thickness up to 1.5mm, but can be made in thickness above 1.5mm if customers require. Materials available include Nylon 6/66, Polyslider, POM, PEEK, X-30, NOMEX, PP, Mylar, PC, PVC, HDPE, LDPE, Kapton, Teflon, Fibre, Bakelite, rubber, felt wool, etc., offering much freedom of choice.

President Mr. Ching-Ya Shih said Yi Hung has one of the best customization capabilities in the industry. To provide better service to the fastener industry, he can modify the inside diameter of washers for clients to form not just circular shapes but also others. Special geometry makes it easy for clients to insert washers without dropping them.

Furthermore, they had successfully manufactured rare special washers with an inner diameter less than 1.00mm. President Shih said his factory has more than 2,800 standard and special-sized dies. He said: "No matter if your desired shape is inner circular,

outer circular or a special variation, we can manufacture as long as the washer is flat and under 70mm in size." Skillful precision washer manufacturing technique is the gold standard that has made Yi Hung's reputation known in the automotive and electronic component industries.

Strict Quality Control and Reasonable Price

Yi Hung has an annual manufacturing capacity up to 1.2 billion pcs, and they use 2D projectors to check dimensions. Dimension measurements are taken every 2 hours during the manufacturing process, and again during the quality control stage before packaging to make sure there are no problems before shipping. They also strive to provide price-competitive products. If a client needs products in large volumes, Yi Hung can use injection molding to lower the client's cost; if there is little volume needed, they can resort to stamping.

Global Exposure & Market Expansion

All of their products comply with EU environmental regulations and are exported to Europe, the U.S., Southeast Asia, the Middle East, and even Australia. In the coming year, they will increase global exposure through exhibitions and media publicity. They will stick to sustainable management, quality first and better service, and everyone from the entire company will continue to work hard to create product values for customers. ■
